## Baking requirements for Encompass™ CPET trays

Encompass™ CPET containers are designed to withstand temperatures from -40°F to 400°F (204°C). For optimal results, customer is responsible for testing containers with the appropriate contents under actual conditions for fitness of use. Below are general heating and baking guidelines.

- Place in center of baking sheet on the middle rack when using a preheated conventional oven
- Keep container edges from hanging over the baking sheet or touching the oven walls
- Maintain at least one inch between containers for even heating
- Allow containers to cool before direct handling
- Avoid direct open flame contact such as a barbecue grill, broiler or toaster oven
- Do not re-use containers
- Remove APET lids before baking or re-heating

## Sealing requirements for Encompass™ CPET trays

To complete your package, Amcor offers lidding films, lids and domes designed for premium performance in combination with our CPET trays. Both barrier and non-barrier options are available. Contact Amcor for assistance selecting the best films for your application.

Sealing and usage requirements for Amcor lidding films include:

- Ensure the container is dry and clear of foreign matter and/or grease to achieve consistent seal integrity.
- It may be necessary to peel back, puncture or remove lidding film before heating/baking in a microwave oven to prevent boil-overs or container distortion.

## World-Class Quality and Service
